

ESYMO METAL S.L. is a company that finishes metal pieces with the use of shot blasting, cataphoresis and powder coating processes. The management of the company is aware of the importance of making their production compatible with the protection of the environment to benefit a sustainable development for future generations. To that end, we have defined this environment policy based on the following points:

- Minimize the creation of waste as well as reuse and recycle that remaining material whenever possible.
- Prevent pollution through a sustainable use of resources such as power and water supply and selecting products that do not damage the environment.
- Adopt the necessary measures to guarantee the fulfilment of those environmental regulations applicable to our activity. Requirements established by different interested parties are also included.
- Inform all the interested parties about this environment policy.
- Train and raise our employees' awareness about the possible environmental impact that can be caused, ensuring that they take part in the respectful attitude of the company towards the environment.
- All those activities carried out in our company that may cause environmental impact will be managed with up-to-date actions to protect biodiversity and the environment.
